We wanted to send this newsletter primarily to make you aware of how we are striving to provide the best service for our patients. In our quest to provide more prompt telephone support we are adding a staff member to help with scheduling, checking out patients, and general administrative work. We decided to branch out to you, our best supporters, to help network and find the perfect team player- one who has a heart for people and can multi-task! Resumes may be sent to our fax at 817-442-0550.

Thank you,

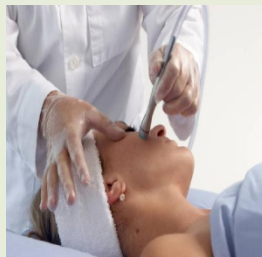

Angela Bowers, MD

Jennifer Aranda, MD

Beth Jouett, PA-C

DermaSweep MD

Multi-Level Skin Resurfacing System

DermaSweep MD is replacing microdermabrasion as a minimally invasive treatment in skin rejuvenation. Rather than blasting particles on the skin, brush exfoliation is combined with topical solutions (such as salicylic or hyaluronic acid) and suction to remove dead skin cells. The treatment is more precise and comfortable allowing you to resume normal activities on the same day. Your skin will be instantly smoother and have a more vibrant glow after the first treatment. You can see the debris removed on the filter as shown in the picture below. More significant results will occur with a series of 4-6 treatments or combined with a chemical peel or FotoFacial/IPL. Take advantage of our special of 4 treatments for \$600 (savings of \$100) which will include a tailor-selected infusion mixture.

Radiesse

Options to help us fill in wrinkles around the mouth, under the eyes and the hollows of the cheeks have continued to expand in dermatology. Using non-invasive fillers such as Restylane, Juvaderm, Radiesse, Sculptra or Artefill allows us to restore a youthful appearance very safely and naturally. Radiesse is our newest addition which provides slightly more longevity than the hyaluronic acid fillers though we often will use both together. Radiesse allows us to provide more support to the cheek bones and hollows under the eyes and cheeks. Typically for our patients we will recommend a tailored plan of fillers at your complimentary consultation. www.radiesse.com

Dr. Bowers has been involved in training the pharmaceutical representatives for Galderma, one of the largest dermatology companies in the world. Galderma has entered into the fast growing cosmetic dermatology sector and will become a major

player in this regard. One new over the counter moisturizer they have recently launched is called DailyAdvance Ultra Hydrating Lotion which will provide relief for your dry skin.

Skinceuticals has launched another sunscreen with mexoryl in it as well as a daily antioxidant moisturizer for the hands and arms. Their new sunscreen is great for darker skin as it won't leave you with any white residue. Elta also has a great new sunscreen that is SPF 41 and has a slight tint to help blend the high concentration of zinc oxide into the skin. This sunscreen is great for sensitive skin as it only has physical blockers in it.

Come visit Kay to let her help you tailor your skincare regimen or review over the latest procedures that we offer. She does offer scheduled appointments to allow our patients better access. To see our product offerings:
