School is in and summer is on its way out, which makes this a great time to look at your skin to see what you can do to slow that aging process. We have several options you can explore and invite you to schedule your skin care consultation by calling to set up your appointment. As always, we look forward to seeing you in our new clinic.

Restylane Day

We are dedicating Friday, September 14, as Restylane Day to introduce Beth Jouett, PA-C. As her introductory offer, you will receive a 25% discount on all syringes Beth injects on this special day. So, call in today to reserve your time slot and take that step to looking years younger.

The Basics

We want to continue to urge you to use the basics in your skin care routine. Sunscreen is vital in preventing skin care and fighting the aging process. Including a retinoid, such as Afirm, along with an antioxidant, such as our new coffeberry product of Revale or Skinceuticals Vitamin C&E with Ferulic, will minimize wrinkles while providing protection at the cellular level. Finally, Skin Medica's TNS provides your skin the growth factors vital to regenerating your collagen. We invite you to learn more about these products by scheduling a skin care consultation to develop a skin care routine perfect for you.

Remember to schedule...

your Fraxel appointments if you have started a series or would like to begin your series. Fraxel is the best tool for resurfacing your skin to correct the aging issues of fine lines, wrinkles and brown spots as well as acne scars. By starting now, you will have noticeable results for the holiday season. Give our front desk a call to schedule your appointments.
